

AT2G14610.1 : AtCAPE9, ATPR1, PR 1, PR1

pathogenesis-related gene 1

PR1 gene expression is induced in response to a variety of pathogens. It is a useful molecular marker for the SAR response. Though the Genbank record for the cDNA associated to this gene is called 'PR-1-like', the sequence actually corresponds to PR1. Expression of this gene is salicylic-acid responsive.

AT5G24780.1 : ATVSP1, VSP1

vegetative storage protein 1

encodes an acid phosphatase similar to soybean vegetative storage proteins. Gene expression is induced by wounding and jasmonic acid.
